

# Easy Installation

The Handy Post is designed to slide down over a common 4"x 4" (actual 3.5"x 3.5" dimensions) wood post with similar dimensions. If your current mailbox or sign post is secured to any type of wood 4x4 post, you can modify it or use it as-is to install the Handy Post with ease.

## Tools Required:

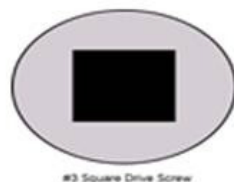

Cordless Drill with #3 Square Head Driver Bit

- or -

#3 Square Head Driver

- and -

Tape Measure

## Optional Tools Required:

PVC Cement (used only for additional Cap install if desired)

and

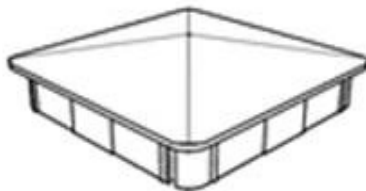

# *The Standard Kit*

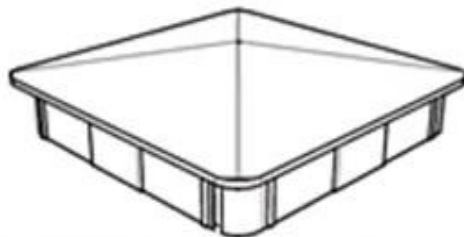

(1) 4"x4"x54" Vertical Sleeve

(1) 5"x5"x24" Horizontal Arm

(1) 4" Internal Cap

(2) 5" Internal Caps

(5) Stainless Steel Screws

---

# Mailbox

Can accommodate most mailbox designs and provides a large newspaper holder for convenience. Easily adjusts to US Postal Height Regulations after the post is installed. Mount address or business sign vertically or horizontally or choose self-adhesive vinyl numbers mounted on the side(s) of the post.

---

## Step 1

## Remove Mailbox

If you are installing a new 4" x 4" x 72" post or No-Dig Support, it is recommended that you place it a minimum of 24" into the ground.

## Step 2

**Make sure the wood 4x4" is no more than 52" above ground. Slide the vinyl vertical sleeve over the wood post.**

## Step 3

**Use (1) screw from the Handy Post Kit to secure the vertical sleeve in the rear near the ground**

## Step 4

**Bring the 5x5x24" horizontal arm down over the vertical sleeve by inserting through both 4" holes.**

---

## Step 5

**Arm can be located anywhere along the upright. Check with your local Post Office for mailbox height regulations.**

## Step 6

Use (4) screws from the Handy Post Kit to secure the arm using the pre-drilled holes. (Two on each side). Do not over tighten.

**Warning:** When attaching a mailbox to the Handy Post arm, use screws that do not protrude over  $\frac{1}{4}$ " inside the arm. This can lead to interference with objects being placed inside the arm, or can cause injury when reaching for newspapers or periodicals.

## Planter

The adjustable arm can be moved about vertically and the newspaper holder closed off with an additional cap (included). Arm can accommodate up to 50 lbs with no sag. Handy Post can be used for many purposes.

**Note: If you are using the Handy Post as a *sign or planter* post , secure the additional end cap with a touch of PVC cement being careful not to get it on the outside – the sun will turn it yellow.**

## **Sign**

**Slide the arm for a beautiful way to display any home or business sign up to 18” wide. For larger signs, you may order a 4x4x108” vertical post or a 5x5x48” horizontal arm to accommodate signs up to 42” wide. Ask the Live Assistant for details.**
