

Frequently Asked Questions – Rain Catcher

What is your Guarantee Policy?

The Mayne Madison Rain Catcher comes with a 15 year warranty that covers any defects in materials and workmanship.

What is the Mayne Rain Catcher made of?

Our rain catcher is roto-molded using high quality polyethylene. The resin includes built in UV inhibitors offering long lasting protection from the elements (products won't yellow or discolor).

How do I Maintain my Rain Catcher?

An occasional spray with a garden hose or power washer is recommended. To clean the product for best results use soap solution and high-pressure water. Rain barrels should be emptied for storage during winter months. This pertains to those parts of the country that experience colder temperatures near or below freezing.

What is Included with a Mayne Rain Catcher?

We include the decorative barrel, planter top, overflow hose, garden hose, a small and large hose clamp, as well as a shut off valve. We do NOT include the downspout connector required to direct rain into the barrel; this can be purchased from your local hardware store.

How Difficult will my Rain Catcher be to Assemble?

Assembly for the Madison Rain Catcher is very minimal; the overflow and garden hoses simply need to be attached using the clamps provided. Detailed instructions for assembly and use are included.

Can I Paint a Mayne Rain Catcher?

While there are paints available for vinyl products nothing has been made specifically for polyethylene. We don't recommend painting your Mayne rain catcher and choosing to do so is done at your own discretion and will void your warranty.

How much Water will my Rain Catcher hold?

The Madison Rain Catcher will hold up to 40 gallons of water. Once the barrel is full, any excess water will be expelled through the overflow hose. When setting up your rain catcher be sure to direct your overflow hose away from the foundation of your house. Alternatively, a downspout diverter can be used which has a lever to direct water into the barrel. Once the barrel is full, you manually flip the lever back to direct water down the regular downspout.

How do I Plant in my Madison Rain Catcher?

The Mayne Madison Rain Catcher features a planter top in which beautiful flowers and plants can be displayed. The water in the barrel acts as a water reservoir system to promote healthy plant growth and minimize watering. Simply fill the planter area with a lightweight potting mix and plant the flowers and/or plants of your choice.
