

Tall Planter Instructions (for part #'s 5829, 4833, 4834)

MIS017

PACKAGE CONTENTS: 1x Tall Planter, 1x Removable Tray Insert

COLORS: Black, Clay, or White

IMPORTANT NOTE:

- DRAINAGE HOLES ARE NOT INCLUDED but can be easily drilled in the desired location depending on the intended use of the planter. See instructions on the reverse side for more details.
- Do not overload the patio planters. Lightweight fillers and potting mixes are recommended and yield better plant growth.
- Suitable for flowers, herbs, vegetables, and small plants.

In the event of missing or defective parts, please email info@gomayne.com or call our customer service department toll free at 866-363-8834 (available Monday through Friday, 8am-5pm EST).

Product Dimensions

Cross Section (typical for all 3 planters)

Removable Tray Insert

All Mayne Tall planters have a removable insert tray. To remove the tray push down firmly on one corner and lift up on the opposite corner.

The Cambridge tray has a different design, to remove it squeeze the two troughs together and lift up. It also includes a steel clip on the bottom for added support.

Note: The trays can also be flipped upside down to create a raised platform for a potted plant.

Insert Tray

Cambridge tray
includes a clip for
added strength

General Information:

- Read instructions carefully before beginning assembly.
- To clean the product, for best results use a soap solution and high-pressure water.
- On the reverse side of this instruction sheet there are a few potting recommendations, but please consult your local garden center for more detailed information.
- The molded polyethylene construction is designed to withstand cold temperatures but you may wish to winter store the planter in a shed or garage to offer the best protection from extreme cold.

Drainage Holes:

Depending on the intended use of the planter, the drainage holes need to be drilled in different locations.

Drainage Option #1:

To utilize the water trough system and create a self watering effect we recommend drilling a hole in the side of the planter as shown in the illustrations to the right. The location varies for each planter style. The overflow hole allows the planter to maintain the ideal amount of water to keep the plant roots moist and avoid over saturation of the soil.

Drainage Option #2:

To use the planter as a regular container planter simply drill one or two holes in the bottom to allow for proper drainage. The insert tray is completely optional and can be removed if it's not needed.

General Planting Recommendations:

To maximize the efficiency of the sub-irrigation system and encourage healthy plant growth we recommend the following:

- 1) Fill the reservoir with water allowing the excess to pour out the overflow hole
- 2) Add a layer of lightweight filler to the bottom of the planter (optional)
- 3) Top up the planter with a potting mix (not garden soil)
- 4) Start planting and enjoy!

Sub-Irrigation System

The Tall Planter Collection includes a water trough insert that creates a sub-irrigation water reservoir at the bottom of the planter. Capillary action allows water in the reservoir to soak upward keeping the soil and plant roots moist. To avoid over saturation an overflow hole is drilled through the outside wall allowing excess water to drain out from the planter. Regular watering is required for the first few weeks giving the root system time to develop. Please note that due to the height of these planters, the root system on some plant may not fully reach the water trough so regular watering may be required for a longer period of time.

NOTE: The information above is only suggested and Mayne holds no liability for the condition or growth of your plants.
